① ~~CONFIDENTIAL~~

~~TOP SECRET~~

Preface

This document is the initial installment in the continued History of the Joint Strategic Target Planning Staff. It is concerned first with the development of problems in strategic target planning during the 1950s and the evolution of plans for the integration of the activities of the various commands into one plan; second with the organization of the Joint Strategic Target Planning Staff at Headquarters SAC; and third with the preparation of the first Single Integrated Operational Plan. In the preparation of this history the historian did research in JSTPS files at Headquarters SAC and in the files of the Joint Chiefs of Staff in Washington. Documents indicated as exhibits (Ex) are on file in the History & Research Division, Directorate of Information, Headquarters SAC.

UNCLASSIFIED

Background

Secretary of Defense Thomas Gates' decision of 16 August 1960 to establish a joint staff at Headquarters Strategic Air Command (SAC) under the direction of Commander in Chief, SAC, brought together for the first time all elements of the armed services with a strategic nuclear capability into one integrated operational plan.¹ Secretary Gates considered the decision the most important he had made in seven years in the Pentagon.² Perhaps the magnitude of this action can be better appreciated after a review of the history of planning and coordination activities for the strategic nuclear offensive between 1952 and 1960.

(U)

Between the end of World War II and the beginning of the Korean War, SAC had a virtual monopoly on the means of delivering atomic weapons. The Joint Chiefs of Staff (JCS) drew SAC forces under its direct operational control in 1946 and strengthened these bonds in subsequent years by preventing usurpation of control of SAC forces by theater commanders.³ Therefore, during these years no coordination problems existed in planning and executing the atomic offensive, but by the early 1950s the situation was changing because of a proliferation of weapons and delivery vehicles. (S)

The United States Navy announced in 1952 that all of its new attack planes were capable of carrying tactical atomic bombs, and that it had on hand aircraft capable of delivering large bombs. Newly

~~SECRET~~

UNCLASSIFIED

~~SECRET~~
~~UNCLASSIFIED~~

2

activated tactical units in Europe and the Far East also became able to deliver small weapons. Indeed, the Secretary of the Air Force, Thomas K. Finletter, announced that "nearly all" USAF combat aircraft were being modified to carry them.⁴ The time was also rapidly approaching when the Soviet Union would become a major atomic power. It exploded an atomic device in 1949, and a year later USAF credited Russia with already having a "formidable long range air force" which by 1952 could cover all of the United States.⁵ (U)

To meet this increased Soviet threat the JCS acted to gain more direct control of the nation's expanding atomic force. In March 1952 an ad hoc committee of that group examined existing procedures for control and coordination of atomic operations and recommended centralizing them for maximum bombing effect and minimum interference between forces. The JCS agreed and established facilities for lateral coordination of planning called Joint Coordination Centers (JCC) in Europe and the Far East.* They were war room facilities for receipt, compilation, display, review, coordination, and relay of information concerning the plans and operations of atomic forces for the benefit of the unified and specified commanders concerned and the JCS.**⁶ This was operational coordination, that is, it took place after hostilities began. (S)

* Buckinghamshire, United Kingdom, and Pershing Heights, Tokyo, Japan.

** In Europe, Commander in Chief Naval Forces Eastern Atlantic and Mediterranean (CINCNELM), Commander in Chief United States Forces Europe (CINCEur), and Commander in Chief Strategic Air Command (CINCSAC), and in the Far East, Commander in Chief Pacific (CINCPac), Commander in Chief Alaska (CINCA), and CINCSAC.

~~SECRET~~
~~UNCLASSIFIED~~

~~TOP SECRET~~

3

UNCLASSIFIED

Early exercises of the Joint Coordination Centers disclosed a requirement for pre-hostilities coordination of commanders' atomic plans. Accordingly, in 1954, the JCS asked each appropriate commander to submit an atomic annex, i.e., a target list, to his war plan and to coordinate it with theater commanders and CINCSAC. In 1955 SAC was directed to act as host for a conference of appropriate commanders to determine a methodology or "modus operandi" for defeat of communist air power. This conference failed to agree on anything except the requirement for periodic coordination of atomic war plans. With JCS approval these conclaves became known as World-Wide Coordination Conferences (WWCC). They were held each subsequent year through 1958. Plans coordinated at these conferences and approved by the JCS were prepositioned with the Joint Coordination Centers for operational coordination required by an exercise or the initiation of hostilities. The total coordination activity pre- and post-hostility, was known as the atomic coordination machinery.⁷

(ts)

How successful was this machinery? The magnitude of the problem probably can be appreciated best by recalling the complex problems of generation, launch, mutual support, and maximum bombing involved in preparing a single command's strike plan. These factors were manageable because the work went on within the framework of a common doctrine. When coordination between commands with different concepts, doctrines, traditions, and techniques was attempted, the problems became formidable. On the positive side, world-wide conferences did enable commanders

~~TOP SECRET~~

UNCLASSIFIED

~~TOP SECRET~~

4

~~UNCLASSIFIED~~

to appreciate more fully each others capabilities, tasks, objectives, and plans. Target lists, forces, and strike timing were discussed and compared. Some conflicts were avoided. Yet the defects of the program were clearly more evident than its successes, at least to SAC. The conferences did not solve targeting conflicts; for example, in the 1957 and 1958 meetings duplications and triplications (two or more commands delivering weapons to the same target) were not significantly reduced. Neither did they achieve mutual support or unity of strategic effort among the JCS commanders. At the JCCs, operational coordination procedures depended upon a highly sophisticated communications system. During peacetime exercises the communications time lag between sending and receipt of messages tended to increase causing a backlog; under combat conditions the system's efficiency would be greatly reduced. In each of the exercises of the JCC machinery from 1958 through 1960 over 200 time over target (TOT) conflicts highlighted the degree of conflict in existing execution plans. In wartime, with disrupted communications, this could result in needless loss of aircraft and crews. A comparison of target lists and some conflict resolution were the net gains in four years of coordination effort.⁸ General N. F. Twining, Chairman of the JCS, believed one fundamental principle had evolved from these coordination activities: ". . . atomic operations must be pre-planned for automatic execution to the maximum extent possible and with minimum reliance on post-H-Hour communications."⁹ ~~(top)~~

5

~~UNCLASSIFIED~~

The Search for More Effective Coordination

The Defense Reorganization Act of 1958 (Public Law 85-599), passed by Congress on 23 July 1958, seemed to open new vistas for better coordination of the strategic offensive. President Eisenhower, in outlining his plan to the Congress, emphasized ". . . the vital necessity of complete unity in our strategic planning and basic operational direction."¹⁰ It was necessary that the Secretary of Defense and the Joint Chiefs, have the authority to take action in these matters. The Air Force, traditionally in favor of integration along functional lines, supported the President's program, as did the Army.¹¹ The Navy was less enthusiastic.¹² (U)

Armed with increased authority over the development and operation of new weapon systems given him by the reorganization act,¹³ the Secretary of Defense, then Neil McElroy, examined plans for the new Fleet Ballistic Missile or Polaris, then in development. In December 1958 he asked the Joint Chiefs for their views on the future employment of the system.¹⁴ (ns)

As spokesman for the Air Force, General Thomas D. White advocated creation of a unified US Strategic Command, to encompass subordinate units from the Air Force (heavy and medium bombers and intermediate and intercontinental ballistic missiles) and the Navy Polaris. With approval of the JCS, the CINCSAC would develop the organization so it could be functional by the time Polaris became operational. Strategic

~~TOP SECRET~~ ~~UNCLASSIFIED~~

~~TOP SECRET~~

UNCLASSIFIED

Air Command personnel would be integrated with those of the participating services and assigned to the new headquarters. General White believed a unified strategic command provided the organizational structure best suited for developing maximum effective atomic offensive plans.¹⁵ ~~(TS)~~

The Army, Navy, and Marine Corps were in general opposition to the Air Force plan. Admiral Arleigh Burke, Chief of Naval Operations, objected to integrating all strategic weapon systems into a single command and recommended rejection of the Air Force position.¹⁶ The Navy had earlier asked that Polaris be assigned to Commander in Chief, Atlantic (CINCLANT) and eventually to United States Commander in Chief, Europe (USCINCEur) and Commander in Chief, Pacific (CINCPac).¹⁷ Admiral Burke saw little need for change: in his opinion coordination had been working well since the 1958 Reorganization Act and integration of Polaris into the fleet would pose no targeting problems. Assignment of all weapon systems to a single command, on the other hand, "... would disrupt and alter the U.S. defense organization."¹⁸ Authority already existed in the JCS to prevent undesirable duplications in strategic targeting, planning, and weapons employment and the CNO believed it should remain there.¹⁹ The Army generally agreed with the Navy, but it believed the entire investigation was premature. It would assign Polaris to the fleet and examine its command structure later when it had become a proven system.²⁰ The Marine Corps favored making the JCS responsible for selection of targets, after which the unified commanders would

~~TOP SECRET~~ **UNCLASSIFIED**

~~TOP SECRET~~

UNCLASSIFIED

assign them to attack forces. It feared assignment of targets to one commander would create a "monolithic" structure to control aircraft and land and fleet missiles which would have great coordination problems and be vulnerable if communications were destroyed.²¹ ~~(TS)~~

As a result of this disagreement, a split decision paper was presented to the SecDef.²² Although General White reported Mr. McElroy did not believe a decision on command arrangements was urgent because the system would not become operational until late in 1960,²³ there was no doubt that the Secretary intended to press for improvement of target coordination procedures. In late July, following an EWO briefing at Headquarters SAC for the SecDef and members of the JCS, he requested the Chairman present his views on this problem.²⁴ ~~(TS)~~

In his reply, General Twining reviewed the history of coordination to date and concluded ". . . not much more progress can be achieved under the present arrangements . . ."²⁵ He rejected modifications to the existing machinery, advocating instead "fundamental changes" to the system. The problem divided into three categories: (1) targeting policy, (2) development of integrated operational plans, and (3) control of strike forces. Regarding the first, he inclined toward the Air Force counter force philosophy, believing the target system should include (in order of priority) long range nuclear delivery capability, government and military control centers, war making resources, and population centers. After adoption of a targeting policy, in the

~~TOP SECRET~~ **UNCLASSIFIED**

~~TOP SECRET~~

UNCLASSIFIED

Chairman's opinion the commander responsible for the strategic mission should develop a national strategic targeting system or list subject to review by J-2 (Intelligence). On the second question, he believed an integrated operational plan was definitely needed. He would charge CINCSAC with its development. Naval carriers would not be assigned any pre-planned strategic targets, but when Polaris developed a significant operational capability it would be brought into the integrated plan. On the third issue, the Chairman reasoned that if the above actions were taken the question of operational control and problems of mutual interference would be "simplified." The promulgation of a national strategic target list (NSTL) and a single integrated operational plan (SIOP) would, in General Twining's words, ". . . provide a sound basis for necessary coordination of operational plans of local commanders with CINCSAC's plan."²⁶ Only after decisions on these issues were made, in the form of a command decision, and enforced, would there be progress in the area of target coordination.²⁷ ~~(ms)~~

At the time he presented his views to the SecDef, the Chairman sought the positions of the services on the issues of targeting coordination by requesting answers to 18 questions.²⁸ Initially, an inter-service ad hoc committee prepared a reply to the questions.²⁹ Later, each service individually prepared their answers.³⁰ As in the issue of command and control of Polaris, a wide divergence of opinion existed between the services. But no further action was taken on the matter

~~TOP SECRET~~
UNCLASSIFIED

~~SECRET~~

during 1959, awaiting the completion of Study 2009, an optimum target system for general war being prepared for Presidential approval.³¹ ~~(TS)~~

Secretary McElroy also left office in December 1959; and the task of resolving the target coordination problem fell to his successor, Thomas S. Gates. The new SecDef gave early indications that he intended to take action. On 20 January he told the Joint Chiefs that he wished to discuss SM-171-59 (the split decision Polaris paper) at their convenience.³² Events during early spring provided fresh evidence that action was needed. Representatives to a coordination conference at Supreme Headquarters Allied Powers, Europe (SHAPE) agreed that targeting of a wide variety of weapons without a waste of resources was ", . . far beyond the capability of coordination conferences."³³ The senior representative of CINCEur and CINCSAC stated in their memo to the JCS: "With the increased number of weapons and their diversified utilization, it appears that an efficient application of the force can only be accomplished by a single authority."³⁴ ~~(TS)~~

Meanwhile, the issue remained stalled at the roadblock of conflicting service positions. On 6 May General Twining advised the Secretary that the Chiefs could not agree on a response to the 18 questions; their individual views were forwarded.³⁵ After a two-day discussion in the middle of June in which the service positions were freely discussed with the new Secretary,³⁶ the Joint Staff prepared a paper expanding on differences in the areas of policy, target detection, and

UNCLASSIFIED

~~TOP SECRET~~

~~TOP SECRET~~
UNCLASSIFIED

planning and coordination.³⁷ The Joint Chiefs were in agreement that a basic targeting policy was needed to translate guidance contained in Study 2009 and the President's decision on the study into workable instructions for unified and specified commanders, and that guidance was needed for selection of targets in a national target list,³⁸ but they differed on what that policy should be.³⁹ General Twining felt the elements of this diversity arose, partially at least, from endemic conceptual differences. He urged that the JCS not wait for a "perfect solution." To fit action to the word, he proposed a national strategic targeting policy.⁴⁰ Service positions went to the SecDef as SM-696-60 on 20 July 1960. ~~(12)~~

On 16 August 1960, after over a year of consideration by the JCS and two Secretaries of Defense, the issues of command and control of strategic systems and strategic targeting became the subject of a SecDef decision. It was a clear compromise, indorsing neither the Air Force position favoring a unified command, nor the Navy position that existing JCS machinery could do the work. Recognized by Secretary Gates was CINCSAC's extensive experience in strategic planning. The individual designated as CINCSAC, acting as the agent of the JCS, would collect at Headquarters SAC a team of experts from all services to prepare a plan for all U.S. forces committed to the initial strategic strike effort. CINCSAC's duties as Director of Strategic Target Planning (DSTP) were an additional and separate responsibility.⁴¹ On 18 August Secretary Gates assigned as General Power's deputy Rear Admiral (subsequently

11

promoted to Vice Admiral) Edward N. Parker, an expert in nuclear weapons and former head of the Defense Atomic Support Agency.⁴² ~~(TS)~~

Organization

General Power began immediately to gather his inter-service staff at Headquarters SAC. Actions to bring in new people and organize and train them in SAC methods proceeded at a brisk pace and they constituted the organization's main problems during the early formulative months. Time for preparation of the first plan was short; the SecDef wanted it done by early December.⁴³ (U)

The organization was kept as small as possible, with maximum participation of the existing SAC staff, but all services participated in all aspects of planning. Commands involved (SACEUR, CINCLANT, CINCPac, CINCPAC, and CINCNELM) were requested to send representatives to a 24 August meeting at Offutt AFB to discuss organization and manning.⁴⁴ Three days later a proposed organizational structure to perform the main work assigned, i.e., preparation of a National Strategic Target List (NSTL) and a Single Integrated Operational Plan (SIOP), was prepared and forwarded to the JCS.⁴⁵ (U)

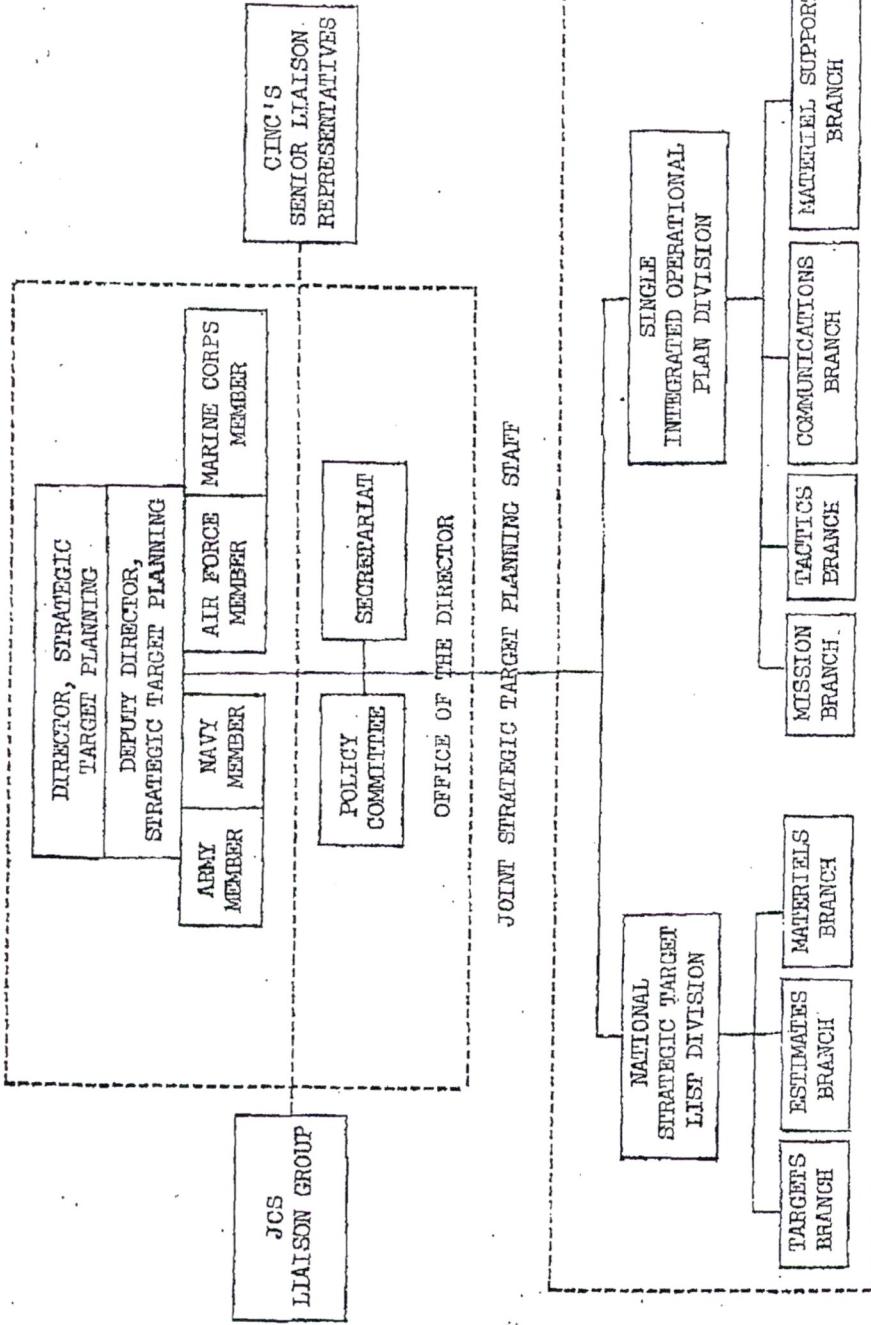

The organization was divided into two general categories (see Chart next page). The first was the Office of the Director. General Power, in his capacity as Director of Strategic Target Planning, had as his mission to:⁴⁶ (U)

~~TOP SECRET~~

~~UNCLASSIFIED~~

JOINT STRATEGIC TARGET PLANNING STAFF

OFFUTT AIR FORCE BASE, NEBRASKA

JCS Publication No. 4, "Organization and Functions of the JCS," 1 Dec 60.

UNCLASSIFIED

- a. Organize a Joint Strategic Target Planning Staff consisting of personnel from the various services possessing the required skills to perform the targeting and planning functions. (U)
- b. Develop and maintain the NSTL and the SIOP for attack of the targets on the NSTL. (U)
- c. Submit the NSTL and the SIOP to the Joint Chiefs of Staff for review and approval, highlighting points of difference which he resolved during the preparation of the NSTL and the SIOP. (U)

Also assigned to this office was a deputy, who assumed the responsibilities of the Director in his absence and acted as his principal assistant and advisor on JSTPS activities, and one representative each from the Army, Navy, Marine Corps, and Air Force. These service representatives served as a personal staff for the Director and his deputy, represented their services in policy matters, and performed a liaison function. They were not in the command channel. Representatives from unified and specified commands supplying forces to the SIOP and a JCS liaison group were also attached to the staff. The CINC representatives (the number assigned was at the discretion of their commander) participated in the preparation of the SIOP and NSTL. They were not integrated into the staff, but were directly responsible to their respective commanders. A JCS liaison group, an integral part of the Joint Staff, JCS, assisted the DSTP in interpreting JCS guidance and informed the JCS and the services of progress in the preparation of the NSTL and SIOP. The CINC and service representatives served as a Policy Committee under the chairmanship of the deputy director. This committee reviewed and

UNCLASSIFIED

~~CONFIDENTIAL~~
~~UNCLASSIFIED~~

approved policy; disagreements went to the director for final decision.

Also part of the Office of the Director was the Secretariat, responsible for administration and personnel supervision. The second category consisted of the two production units of the Target Staff--the National Strategic Target List Division and the Single Integrated Operational Plan Division--which took their names from the work they performed.⁴⁷ (u)

The initial Joint Table of Distribution (JTD) of 269 spaces requested for the above organization was divided as follows: SAC resources - 140 officers, 57 airmen, and 22 civilians; Army - 10 officers; Navy - 29 officers; Air Force - 8 officers; and Marine Corps - 3 officers.⁴⁸ (s)

On 1 September 1960 the JCS approved the proposed organization, officially designating it the Joint Strategic Target Planning Agency (JSTPA),* and the initial Joint Table of Distribution (JTD) consisting of 50 military spaces to be added to the 197 SAC military personnel working in related areas. In one change, the JCS stipulated that the deputy chief of the SIOP Division be a Navy officer in the grade of rear admiral or captain.⁴⁹ (s)

Subsequently, as a result of the survey made of the NSTL Division's intelligence structure and the intelligence support agencies of SAC

* On 29 September 1960 the JCS redesignated the organization as the Joint Strategic Target Planning Staff. (SM-957-60, "Strategic Target Planning," 29 Sep 60.)

~~UNCLASSIFIED~~

~~CONFIDENTIAL~~

~~UNCLASSIFIED~~

Headquarters, at the Chief of Naval Operation's request, the Deputy Director of JSTPS requested 69 additional military spaces, which with the exception of 5 airmen from the Air Force were to be furnished by the Navy and Army. Forty of these were to be assigned to Headquarters SAC Intelligence functions and 29 to the JSTPS.⁵⁰ After review, the JCS approved the interim augmentation of 29 military personnel and 3 civilian spaces, but disapproved the additional 40.⁵¹ (e)

The organization to prepare the first NSTL and SIOP was assembled in haste because the SecDef had ordered the two documents completed by 14 December 1960. Emphasis had been placed on acquiring the best people from the services to do the job; not much analysis had been made of existing capability within the SAC staff. But with completion of the initial NSTL and SIOP* the organization could be adapted for the future, i.e., the work of keeping the documents current. General Power recommended a reduction; the non-SAC authorization would be reduced from 83 to 75 spaces and SAC personnel in a dual function status would be cut from 219 to 111. He also asked that the number of permanent representatives of the CINCs be held to a minimum.⁵² (e)

The Army and Navy did not agree. The Chief of Naval Operations did not think it adequately represented all services at all levels, but favored the Air Force. Because the duties of the NSTL Division concerned primarily intelligence and target selection, in the Navy's opinion all

* The preparation of these documents will be treated later in this history.

~~UNCLASSIFIED~~

~~SECRET~~

~~SECRET~~
UNCLASSIFIED

services should be equally represented. Neither did Admiral Burke favor the proposal to reduce the number of the CINC representatives, preferring instead to leave their appointment to the discretion of the commander concerned. Injecting a new feature, the CNO recommended creation of an intelligence panel, with representatives from the CINCs, the services, the Joint Staff, and the Central Intelligence Agency, ". . . to provide the broadest and most expert intelligence base which can be achieved to support the SIOP."⁵³ The Army did not think the proposed manning met the criteria of a joint staff, nor did it agree with maintaining SAC officers with two jobs in key positions, except for the DSTP. It recommended equal representation among services in the NSI Division and proportional representation (based on committed forces) in the SIOP Division.⁵⁴ (s)

The DSTP argued that existing JCS guidance for creation of joint staffs did not provide precedent for assignment of joint staff responsibilities to a specified command. He defended the JTD as representing his interpretation of JCS guidance: it was the most economical, made the most efficient use of space and technical equipment, and most adhered to the composition of forces and weapons assigned to the plan. He had not used forces submitted to the plan as a basis for representation; if he had the Navy and Marine Corps would have been reduced by one-half. In the document 14 key positions out of 34 were identified as Army, Navy, or Marine Corps (41 per cent). Although the DSTP had

~~SECRET~~
UNCLASSIFIED

~~TOP SECRET~~

the best qualified would be chosen for these posts irrespective of service.⁵⁷ In the DSTP's opinion, the guiding principle of the JSTPS organization was "... that of service representation proportional to the service forces involved."⁵⁸ The organization as submitted was approved by the JCS on 14 June.⁵⁹ (a)(u)

Preparation of SIOP-62

General Power, in his capacity as DSTP, was guided by the National Strategic Targeting and Attack Policy (NSTAP), a JCS document which formed the core of this nation's strategic strike planning. [Specific objectives of this policy were to destroy or neutralize Sino-Soviet Bloc strategic strike forces and major military and government control centers, and to strike urban-industrial centers to achieve the level of destruction indicated in Study 2009.] These objectives were to be accomplished by integrating strategic forces and directing them against a minimum list of targets.⁶⁰ (TS)

The first task of the JSTPS after its organization was to determine what targets were to be attacked. On 18 August General Power directed his Directorate of Intelligence to prepare a preliminary target list. At the initial meeting of the Staff six days later Intelligence presented a working list, known as the National Strategic Target Data Base (NSTDB) of about [4,000 targets.] A Steering Committee headed by Admiral []

* [From this list a team of experts from NSI Division and the CINCs eventually prepared the final list.]

~~TOP SECRET~~

~~TOP SECRET~~

[Parker insured that the targeting needs of all the CINCs were satisfied.

General Power wanted the final list to include only targets which had been positively identified and located. 61] (es)

Basic to the preparation of the NSTL was the NSPDB, a compilation of [Sino-Soviet targets of strategic significance] representing the combined knowledge of U.S. intelligence sources. By a process of refinement the highest priority targets in this target data base eventually comprised the NSTL. After assigning a relative worth to the targets in the base by means of a target weighing system,* the process of developing desired ground zeros (DGZs) began. [Installations were grouped into target islands or groups of proximate installations identified as complexes. Computer programming then selected the optimum number and location of DGZs within the islands which when struck would achieve the desired degree of destruction. The results were verified manually. After the number of weapons available and the degree of assurance of delivering a weapon to each bomb release line were determined, a process of "optimum targeting" was employed in selecting the number of DGZs that should be attacked and the desired assurance of delivery to be applied to each DGZ. An "optimum mix" DGZ list, the best combination of types of targets (military and urban-industrial)] considering the number of

* A complex process of determining the relative worth of potential military and urban-industrial targets by application of a point system. This ranking was the basis for DGZ development and DGZ priority. Existing SAC military and urban-industrial weighing system was modified in coordination with CINC representatives. (Manual, "Target Weighing System," 19 Dec 60, prepared by JSTPS, B-77750; IOM, Col J. M. Philpott, Ch, NSTL Div, JSTPS, to IWI, "JSTPS History," 9 Oct 61, B-80604.)

~~TOP SECRET~~

24

the NSTL was produced. It was a list of all National Strategic Target Data Base installations to be attacked in the SIOP. These targets fell into [three general groups. 68 (S)]

- (1) A minimum number of targets whose timely and assured destruction will accomplish the specific objectives set forth in the NSTAP (this was the minimum NSTL). (S)
- (2) Defensive targets necessarily struck in order to strike the targets in (1) above. (S)
- (3) Other targets which the DSTP and the CINCs agree should be taken under attack and those other installations in the National Strategic Target Data Base significantly damaged because of co-location. (S)

On 1 December 1960 the SecDef, JCS, commanders of unified and specified commands committing forces to the SIOP, and other high ranking military and civilian leaders, 32 in all, gathered at Headquarters SAC for briefings on SIOP-62.⁶⁹ [Presented were the NSTL; operational concepts; enemy defenses; force application; assessment of sortie success, damage, and casualties; and dissents to the plan.⁷⁰ (S)] (b)(1) 3.3.7(b)(5)

The complete SIOP-62 was a detailed plan of what targets were to be attacked, by what forces, and in what manner during the initial strategic attack [against the Sino-Soviet Bloc.] It superseded any conflicting guidance contained in the Joint Strategic Capabilities Plan. Eight annexes represented the key portions of the plan: intelligence, responsibilities and command relationships, atomic, concept of operations,

~~TOP SECRET~~

25

coordinating instructions, strike timing, communications, and administrative procedures.⁷¹ [The JCS, acting under orders from the President, reserved the prerogative of putting the plan into effect. Its mission was to:⁷² (TS)]

- a. Destroy or neutralize the Sino-Soviet strategic nuclear capability and primary military and government controls of major importance. (TS)
- b. Attack the major urban-industrial centers of the Sino-Soviet Bloc to the extent necessary to paralyze the economy and render the Sino-Soviet Bloc incapable of continuing war. (TS)

Factors such as time over target, launch base, delivery vehicle, weapon, height of burst, DGZ, delivery route, tactics, and timing were planned in minute detail.⁷³ A degree of flexibility was built into the plan, however. Sixteen options for executing the plan were available, based on the amount of warning available.* Strategic Air Command's alert force could be launched under positive control. Follow-on forces could be held and redirected before the execution message was received and manned systems in the follow-on force could be recalled even when airborne; mobile forces (aircraft carriers and missile submarines) could launch from alternate positions; and fixed missiles had dual targets.

(TS)

* Option 1 was the alert option; only the alert force could be launched under this condition. Options 2 through 15 were based on progressively increasing preparation time from 1 to 28 hours. Option 16 was predicated on a minimum of 28 hours preparation time for all forces (Appendix 1 to Chap 10, JSTPS Planning Manual, 1 Apr 61).

Disagreements with certain SICP-62 planning factors were presented at the briefing by CINCLant's senior representative to the JCS, Rear Admiral J. J. Hyland. Although they had earlier been resolved by the DSTP,⁷⁵ by JCS direction they were presented as part of the SecDef briefing.⁷⁶ First, Admiral Hyland objected to what he called the [] DSTP policy of justifying a maximum rather than a minimum target list. Forces were rigidly committed to the SIOP as first priority, giving the commander little latitude in hitting other targets important to him. Because of guidance that only SIOP forces would strike NSTL targets, many theater targets were placed on the list to make sure they were struck. This expanded the target list beyond what CINCLant believed to be specific objectives of the NSTAP.⁷⁷ The DSTP's decision had been that excess forces should be used to increase the assurance of delivery of high priority targets rather than for attacking additional targets not part of the minimum NSTL.⁷⁸ Second, the CINCLant Senior Representative disagreed with the weather factors developed for the SIOP. He believed the plan to use visual delivery aircraft to attack at random times to be erroneous. He also disagreed with the process of averaging the good daylight capability of these aircraft with their poor night capability. This resulted in a low assurance factor which must then be raised by assigning additional sorties. CINCLant contended that if a carrier visual delivery aircraft was assigned a DGZ and the strike order came at night or during bad weather it could wait and deliver the weapon the []

TOP SECRET

same as if the order had come in daylight and good weather. Because of carrier mobility, commanders were not required to launch immediately upon receipt of tactical warning.⁷⁹ General Power had earlier emphasized that the weather factor was an important one in determining the probability that a non-all-weather mission would be capable of doing the job assigned at any time during the year. A delay of launching due to weather might not prevent the mission from eventually being accomplished successfully, but the mission would not be completed as planned. For planning purposes in SIOP-62, for a strike selected at random, percentage figures were promulgated which represented the probabilities that weather and visibility conditions in each area would permit target identification by non-all-weather aircraft.* The percentage ranged from 38 to 54 per cent.⁸⁰ General Power decided that in executing SIOP-62 if weather was favorable non-all-weather aircraft would go as scheduled, but if it was unfavorable individual CINCs would use alternate launch schedules.⁸¹ In his third dissent, Admiral Hyland disagreed with the assurance factor used in SIOP-62. Although he agreed that the specific percentage to use was a matter of judgment, in his opinion the effort and expense involved in planning for higher than 90 per cent assurance of delivery on any single target was too great for the results obtained.⁸²

* The equation was thus: the probability of success is equal to the reliability of the weapon system times the enroute and target area survivability of the weapon system times the probability of correct target identification for all-weather aircraft.

~~TOP SECRET~~

28

[The DSTP's decision of 31 October 1960 had placed the maximum assurance at 97 per cent.]⁸³ [←←→]

The SIOP-62 was approved without major change by the JCS, SecDef, and the President on 2 December to be effective 1 April 1961.⁸⁴ The plan went into effect on that date.⁸⁵ [←→]

Summary

The Single Integrated Operational Plan for 1962 represented a unique advancement in war planning. Prior to its development, atomic targeting was coordinated after the fact, handicapping mutual support and economy of force. After lengthy consideration of the issue by the JCS produced no unanimity of opinion, the Chairman proposed a national strategic targeting policy. The Secretary of Defense accepted this plan and directed it be used as guidance by CINCSAC in his new capacity as Director of Strategic Target Planning. In his decision of 16 August 1960, the Secretary decided a strategic command was not needed, but neither did he think target planning could be done within existing JCS capabilities. He created the Joint Strategic Target Planning Staff, responsible to the JCS, but located at Headquarters SAC. The JSTPS replaced the Worldwide Coordination Conference method of planning coordination, although operational coordination was still required in the [Post E-Hour phase]

of nuclear war.* Working with a short deadline, a nucleus of SAC officers, assisted by officers of other services assigned to the new organization, produced the first NSTL and SIOP in less than four months. As expected, the process was not completed without differences arising from diverse service concepts, but they did not interfere with submission of the final plan to the SecDef on 1 December and its acceptance at that time. The JSTPS was not a panacea for all the problems of nuclear strike coordination, but it was a beginning, a foundation for future development. (S)

* See JCS 2056/251, "Coordination of Atomic Operations," 11 May 61 [Decision on study by J-3], B-79820. The total effect of SIOP on the atomic coordination system could not be accurately evaluated until after completion of the world-wide atomic exercise scheduled for September 1961. (S)
